

WHAT IS CLAIMED IS:

1. An optical magnifying device for a cellular phone which includes a body with a screen connected thereto, a button panel with buttons on the button panel, and a panel cover mounted to the body, the panel cover having an aperture and holes, the screen on the body enclosed by a periphery of the aperture and the buttons extending through the holes, said optical magnifying device comprising:

a magnifying plate adapted to be engaged with the aperture of the panel cover.

2. A cellular phone comprising:

a body with a screen connected thereto and a button panel having buttons on said button panel, and a panel cover mounted to said body, said panel cover having an aperture and holes, said screen on said body enclosed by a periphery of said aperture and said buttons extending through said holes, each button having a convex top surface and a pattern sheet connected to an underside of each button.

3. An optical magnifying device for a cellular phone which includes a body with a screen connected thereto, a button panel with buttons on the button panel, and a panel cover mounted to the body, the panel cover having an aperture and holes, the screen on the body enclosed by a periphery of the aperture and the buttons extending through the holes, said optical magnifying device comprising:

a frame adapted to be slidably mounted to said body and a magnifying plate connected to said frame, said magnifying plate adapted to be mounted above the panel cover.

4. A cellular phone comprising:

a body with a screen connected thereto, a button panel with buttons on said button panel, a panel cover mounted to said body and said button panel connected between said body and said panel cover, said panel cover having an aperture and

holes, said screen on said body being enclosed by a periphery of said aperture and said buttons extending through said holes, and

a frame pivotably mounted to said body and a magnifying plate connected to said frame, said magnifying plate located above said panel cover when said frame
5 is pivoted toward said body.

5. The cellular phone as claimed in claim 4 wherein said frame has two legs extending therefrom and said two legs are pivotally connected two sides of said body.

6. The cellular phone as claimed in claim 4 further comprising two
10 protrusions extending from one of two sides of said body and said frame having a locking member extending therefrom, said locking member engaged with one of said two protrusions.

7. The cellular phone as claimed in claim 6 wherein said locking member
has a hole defined therethrough which receives one of said two protrusions.
